Driving 8.2 Million Itineraries Sent

with almost 2 Million Seats Checked for Travelers

Cornerstone's first data automation solutions launched over twenty years ago, and we have continued to innovate solutions to meet the evolving needs our customers.

1990s

First Windows-based QC system and introduced the first fully web-based, real-time data consolidation and reporting solutions

2004

Released open architecture to acquire different types of travel data

2007

Launched intuitive analytics engine to transform data in actionable insights

2015

Introduced data visualization platform to let customers tell each story

2001

Launched data management and fare processing solutions

2005

Introduced first fully hosted reservation management, document delivery and reporting solution

2010

Launched ability for customers to create their own applications for their unique needs

Launching new solutions to drive virtual payments and manage the traveler's journey

A single integrated technology platform

Our industry experience is deep and wide, engaging with leisure travel agencies, travel management companies, corporations, consolidators, governments, and third-party providers

Our flexible technology platform is designed to integrate with any GDS, consolidate data from a variety of sources, and provide advanced visualizations for your data

Our platforms are driven by outcomes

Reservation Management

Quality reporting for business decisions starts by monitoring the data at the moment it is created

Automated Processing

Business rules automation looks for errors and fixes those errors in near real time, optimizing workflows and reducing manual touches

Information Management

Data is acquired, cleansed, normalized, and warehoused in order to feed reporting and visualization

Data Visualization

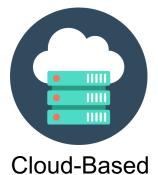

Combine reservation data with other data sources to create data visualization that drive insight and decision-making for your business
